Pressure gauges

Badotherm's range of pressure instruments cover ranges from 2.5 mbar at the lowest pressure to 4000 bar at the maximum. Case diameters are available from 40 mm to 250 mm. Accuracies between 0.2% and 2.5% can be provided. All gauges meet the stringent EN837 and CE standards. Other standards that are available on the Badotherm pressure gauges are ATEX, GOST-K, 3.1 and other material and calibration certificates.

The internals of our pressure instrument range are manufactured in brass 316 stainless steel and monel. Badotherm pressure instruments offer one of the most comprehensive product ranges available in our industry.

Badotherm "Safety baffle wall" pressure gauges represent the safest gauge in our industry and can be found at the higher end of our product range. These gauges are manufactured completely in stainless steel or in stainless steel with a plastic compound casing. In addition, this product is available in both dry, glycerine fillable or filled executions as standard.

This filling option is available for our complete range. Most of our instruments are compatible with mechanical or electrical accessories, like drag pointers and contact devices, and can be combined with a variety of chemical seals.
