

BDT12 – Diaphragm type pressure gauge 100 & 160mm

Product description

Badotherm pressure gauge model BDT12 is a diaphragm type pressure gauge and suitable for all gaseous and liquid media, as well as for viscous media and suspended solids. This pressure gauge is typically used for applications in the chemical, petro-chemical, oil & gas, power and utilities, machine building and general process industries. These gauges can be made with threaded connections and flanged connections according ANSI, DIN, and JIS standards.

Design standard

EN837-3

Dial sizes, ranges & accuracy

Possibilities in ranges and accuracies are led by the dial size. Accuracy class is based on dry gauges. Liquid filling can affect the accuracy. Compound and vacuum ranges are possible as well based on the standard ranges

Dial size	Ranges	Accuracy
100mm 160mm	0...16 mbar to 0...250 mbar (flange Ø 160mm)	1.6%
100mm 160mm	0...400 mbar to 0...25 bar (flange Ø 110mm)	1.6%

Mounting variation

All BDT12 gauges are bottom connection type A.

- **type A** (13) bottom connection, direct mounting

Materials of construction

	BDT12
Case	AISI 304
Bezel	AISI 316
Process flange / lower part ¹	AISI 316
Sensing element ¹	AISI 316 (≥ 4 bar Duratherm)
Movement	Stainless steel
Pointer	Aluminium
Dial	
Window gasket	NBR
Blow out	
Fill plug	NBR (HNBR for filled gauges)
Flange gasket	FKM
Window	Glass

¹ wetted materials

Process connection

Threaded version

Standard thread	optional
G ½ A or ½" NPT	G ½ or ½" NPT-f

Other thread standards such as ISO 7-1 R (BSPT), or DIN 13-1 (M20x1.5) can be selected as well. Due to the weight of the assembly a ¼" thread is not advised.

-> See datasheet "thread information" for specific thread details

Flanged version

ASME B16.5			
Size	Rating	Facing	Roughness
0.5" to 2"	cl.150 - cl.300	RF, LMF, FF, SGF	Ra 3.2-6.3 µm
		RJF, SFF	Ra <1.6 µm
		SMF, LTF, STF, LGF, LFF	Ra <3.2 µm

EN 1092-1			
Size	Rating	Type	Roughness
DN20 to DN50	PN10-40	A, B1, E, F	Ra 3.2-12.5 µm
		B2, C, D, G, H	Ra <0.8-3.2 µm

Pressure limitations

The pressure gauges are built to withstand harsh environments however the EN 837-3 limits the use of a pressure gauge according below table.

Dial size	Steady	Fluctuating	Short time
100mm /160mm	FSV	0.9 x FSV	1.25 x FSV

FSV: full scale value

range	standard	Option 1	Option 2	Type 5
16 mbar	5x FSV	10x FSV	5 bar	-
25 mbar				
40 mbar				
60 mbar				
100 mbar				
160 mbar				
250 mbar	1.25x FSV	5x FSV	10 bar	40 bar
400 mbar				
600 mbar				
1.0 bar				
1.6 bar				
2.5 bar		40 bar		
4.0 bar				
6.0 bar				
10 bar				
16 bar				
25 bar				

Temperature limitations

The gauges can withstand ambient and process temperature up to a certain limit. The limitations on temperature are:

	Ambient	Medium	Storage
Dry case	-20°C ...+60°C	-20°C...+100°C	-40...+70°C
Filled case	-20°C ...+60°C	-20°C...+90°C	

The variation of indication caused by the effect of temperature shall not exceed: $\pm 0.8\% / 10K$ FSV

Window

Standard BDT12 gauges have a glass window. Optionally it can be selected with laminated safety glass or plastic

Pointer

Standard pointer is a slotted black painted aluminum pointer and optionally with a micro adjustable pointer

Dial facing

The dial plate is made from aluminum and coated with UV resistant white coating. The black dial markings, scale, numbering, and interval is according the EN 837. Options like colored dial, customer logo, or colored segments are possible as well. Scale interval and numbering is following the EN837.

Degree of protection

The BDT12 has a standard degree of protection of IP65. The values are determined according the IEC/EN 60529.

Add-on contacts

The BDT12 can be equipped with an add-on contact mounted in a Makrolon hood. For low pressures <100 mbar inductive contacts are advised.

Case filling

The gauges can be filled with different kind of fill fluids. The fill fluids available are:

- BPF01 - Glycerine 86%
- BPF02 - Silicon
- BPF03 - Silicon for contacts
- BPF04 - Mineral oil (Foaming service)
- BPF05 - Halocarbon (inert fluid for oxygen service)

Special service

The gauges can be supplied cleaned for oxygen use. This means the gauge is assembled and tested in a special area free of oil. The gauges are individually packed in a plastic bag with marking. The symbol used is:

Certification & Declaration

Calibration

Gauges are full range calibrated as a factory standard. Optionally you can select a 5 points calibration certificate

[ATEX 114 - 2014/68/EU](#)

ATEX restrictions are explained in the IOM and in the ATEX background datasheet.

[EN 10204 material certificate](#)

A material 3.1 certificate on the wetted parts can be supplied.

Retaining bolts & nuts

The retaining bolts between upper and lower part are made of A4-70 (AISI316) material.

Size	Grade bolt	Grade nut	Material
M6 (≤250 mbar)	ISO 3506-1 A4-70	ISO 3506-2 A4	AISI 316

Torque

The closing between upper part and lower part is done with retaining bolts. The torque of the bolts is 10 Nm (7.3 ft-lb).

Gaskets

For the BDT12 a gasket is supplied for the closing between the upper and the lower part. The standard flange gasket is FKM (Viton) material. Depending on the chemical compatibility the option of NBR or EPDM can be selected as option.

Material	Operating temperature
FKM ◀	-25 / +204°C
NBR	-40 / +108°C
EPDM	-55 / + 150°C

◀: Standard gasket

Wetted part and diaphragm combinations

The BDT12 can be selected with process flanges in exotic materials or coatings. The diaphragm can be executed with a exotic material protection sheet as well. Applying protection sheets will have consequences for the accuracy of the gauge.

Flange + connection	Diaphragm material		
	General name	UNS	Wst.
AISI 316(L)	AISI 316L	S31603	1.4404
	Alloy C276	N27600	2.4810
	PTFE Sheet	-	-
Alloy 400	Alloy 400	N04400	2.4360
Alloy C-276	Alloy C-276	N10276	2.4810
PTFE lining	Tantalum	R05200	

Polymer solutions

Polymer solutions come in several executions and forms. The technical data on thickness and temperature limitation can be found in datasheet "polymer solutions". The diaphragm of the BDT12 can be treated with the below coatings or sheet. Sheets cannot be used with application with vacuum pressures.

- PTFE coating
- ECTFE (Halar®) coating
- PFA coating
- FEP coating
- PTFE sheet

The lower part of the BDT12 flanged can be executed with:

- PTFE coating
- PFA coating
- PTFE lining

Lining on threaded versions is not advised. G ½" A is possible in combination with a rotating process nut to prevent damage to the lining

Dimensions table threaded

◀: is the sign for the standard pressure gauge.

1: Based on protection sheet. Use of protection sheet leads to a lower accuracy class up to class 2.5. Sheet is not possible for application with vacuum.

2: Not possible for NPT thread, G thread only in combination with rotating nut as process connector
