

# FSO-BRF type seal - flush diaphragm

## Design description

The FSO-BRF construction is designed to obtain a diaphragm seal with full wetted parts in exotic materials. With Badotherm's unique resistance weld technology, a stainless steel body (non-wetted) has its wetted parts (diaphragm and raised face portion) covered by sheet material in the required exotic material. This is far more economic than producing the full flange in exotic material. FSO-BRF is typically used in combination with (differential) pressure transmitters for applications such as level, flow and (absolute) pressure measurement.

## Diaphragm in exotic materials

The unique feature of the BRF is the Badotherm resistance-weld technology. The stainless steel body (non-wetted) has its wetted parts (diaphragm and raised face area) covered by sheet material in the required exotic material. The standard thickness of diaphragm foil is 0.075mm, for some materials other thickness may be available.

## Flange size, rating and facings - ASME B16.5

ASME B16.5			
Size	Rating	Facing	Roughness
1" to 4"	cl. 150 - cl. 2500	RF, LMF, FF	Ra 3.2-6.3 µm
		SMF	Ra <3.2 µm

## Flange size, rating and facings - EN 1092-1

EN 1092-1			
Size	Rating	Type	Roughness
DN20 to DN100	PN10-400	A, B1, F	Ra 3.2-12.5 µm
		B2	Ra <0.8-3.2 µm

## Flange size, rating and facings – JIS B2220

JIS B2220			
Size	Rating	Type	Roughness
DN25 to DN100	10-20K	RF	Ra 3.2-12.5 µm

Body Material	Diaphragm material		
	General name	UNS	Wst.

	Nickel 201	N02201	2.4068
	Tantalum	R05200	-
	Titanium Gr. 1	R50250	2.7025
	Zirconium 702	R60702	-

## Cover flanges

FSO seals are equipped with a cover flange of a different material than the seal body material. The material can be selected based on pressure/temperature rating, corrosive ambient conditions, or other influencing conditions. Examples are A350 LF2, A105, F55, AISI 321, or in combination with one of the polymer coatings.

## Gold Coating

Due to its design, gold coating on the BRF designed is not recommended.

-> See datasheet "Gold coatings"

## Polymer Coatings

Polymer solutions come in several types. Additional specifications of the polymer solutions (thickness, temperature limitation, and more) can be found in datasheet "polymer solutions". Due to its design, BRF has only a few options available:

- PTFE coating (low temp applied)
- PTFE sheet

-> See datasheet "Polymer solutions"

## Capillary tube and armor (protection)

The standard capillary mounting position is top side (axial) of the seal. The standard tube material is TP316 (316SS), optionally available in Alloy 400. There are three options in ID of the capillary; 2mm, 1mm, and 0.7mm. Badotherm capillaries are always protected against mechanical forces by armor. This doubled shielded armor consist is standard AISI 304, and optionally AISI 316. Additionally, the armor could be protected with a PVC sleeve in white, black, optionally with ATEX114 approval to protect against dust and water ingress and possibly corrosive ambient atmosphere.

-> See datasheet "Capillary lines"

## Flush rings and flush flanges

Badotherm offers matching flush rings or flush flanges to their diaphragm seal. On request equipped with blind plugs, vent plug and or flushing / draining needle valves, which can be fitted or welded to the complete construction.

-> See datasheet flush rings

-> See datasheet flush flanges

-> See datasheet reducer flanges

## Lifting handles

Larger sizes and ratings of diaphragm seals can weigh up to 50 kg. Handling and installation can become a challenge. As from 15kg it is recommended to apply a set of lifting handles, welded on the sides of the flange of the seal. This can be used to handle it easier and install it in a safer way or have attach lifting tools to it.

-> See datasheet "diaphragm seal accessories"

## Material Certification

Material traceability and related certification are applicable for all process wetted parts. Material certification possibilities depend on the type of seal, the assembly construction and the materials used. Material certification is in accordance with EN10204 3.1.

Additional material certification and testing can be provided on request, such as Positive Material Identification (PMI), Intergranular corrosion (IGC) testing, material certification in accordance with EN10204 3.2, NACE conformity for ISO-15156 (MR-0175) and/or ISO-17945 (MR-0103), NORSOK M-630 and many more.

-> Please note that the responsibility for material selection always rests with the user.

## Flange Marking & Traceability

All flanges are marked by the forging shop with heat number, material designation, size, and rating. Badotherm adds a Badotherm reference number and the manufacturers name to the flange for traceability purposes.

## Flanges and origin

The seal parts are made from forged materials according to the applicable standards. The standard sourcing of flanges is of international origin. Optionally regional preference can be requested, for example materials from EU origin.

## Testing

All seals are helium tested according the EN 13185 test procedure A.3 up to  $10^{-9}$  mbar l/s before used on a diaphragm seal application.

-> See datasheet "Diaphragm Seal testing"

## Cleanliness of the wetted parts

All parts are standard cleaned from excessive oil and grease. When additional requirements are needed, the parts can be cleaned according customer requirements and cleaning specifications.

## Limitations

There are some limitations in mounting the FSO-BRF to pressure instruments.

- $\leq 1.5"$  (DN25) can have maximum capillary length 6 mtr
- Direct mount is always with 80mm extension tube.

## Gaskets

For the BRF soft gaskets are advised, such as camprofil (grooved) gaskets. Sizes of the diaphragm area are designed to match the gaskets used between the process and seal or flush ring. For the ASME B16.5 RF flanges the ASME B16.20 is used for dimension restriction to ensure both the spiral and grooved gaskets are fully supported by the serrated area. For the EN type B1 flanges the gasket dimensions are matching the sizes of the EN 1514-2. The size "G" in the tables refer to the start of the gasket surface.

## Example performance calculation

Whether a diaphragm seal can be used for a specific measurement, depends on the size of the diaphragm. That size is restricted by the size of the diaphragm seal.

For pressure transmitters, Badotherm offers an online performance calculation tool to calculate its performance and to ensure that the diaphragm size is suitable for your measurement.

The table below presents the minimum span of the respective diaphragm sizes with standard process conditions. As rule of thumb, a TPE of max 5% is often considered acceptable, but it depends per situation.

Minimum span table

dD	AP/GP	DP
23.5mm	17.5 bar	na
32mm	11 bar	1850 mbar
44mm	1575 mbar	255 mbar
57mm	415 mbar	70 mbar
72mm	155 mbar	30 mbar
81mm	110 mbar	20 mbar

*Pressure transmitter; ambient temperature -10...+30°C; process temperature 100°C with BSO 22 fill fluid; 3 meter capillary; ID 1mm, DP both sides mounted with seal*

See the general overview of all diaphragm sizes with several standard situations and in combination with Badotherm pressure gauges.

## Retaining screws

The cover flange and the seal part are fixed together hexagon socket cap screws. The length of the screws depends on the thickness of the cover flange.

Grade bolt	Type	Size
A2-70 ( ISO 3506-1)	ISO 4762	M6

## Standards used

### Design Standards

Standard	Description
ASME B16.5 - 2020	Pipe flanges and flanged fittings
ASME B16.20 - 2017	Metalic gaskets for flanges
EN 1092-1 - 2018	Circular flanges for pipes
EN 1514-2 - 2021	Dimensions of gaskets
JIS B2220 - 2012	Japanese Flange Standard
GOST 33259 - 2015	Russian Flange Standard

### Test Standards

Standard	Description
ISO 20485 - 2018	Non-destructive testing - Leak testing - Tracer gas method

### Material Standards

Standard	Description
NACE MR0175/MR0103 ISO 15156 - 2020	use in H <sub>2</sub> S-containing environments in oil and gas production
NORSOK M-630 - 2010	specification for use in pipelines
ASTM standards	Material specific standards

### Certification Standards

Standard	Description
EN 10204 - 2017	Inspection documents
ASME IX	Welding, Brazing, and Fusing Qualifications
ISO 15610	Specification and qualification of welding procedures for metallic materials
